

ISDN PRI

ATC's PRI Service is delivered over a 1.544 Mbps T1 connection or greater and consists of 23- 64 Kbps voice channels. The ATC PRI solution offers an array of value added features and is ideal for call center applications, computer telephony integration, telecommuting and video conferencing.

Benefits

- Efficient call handling
- Caller ID with name and number
- A single, easy-to-understand invoice

Flexibility

- Advanced features to support call center applications
- Dynamically allocate channels to support multiple voice trunk groups

Savings

- Significantly lower your rates and monthly recurring charges
- Add data applications without the expense of a new circuit
- Volume and term discount plans provide substantial savings on already competitive ATC rates
