

SIP Trunking

SIP (Session Initiation Protocol) has become a catalytic force helping shape today's telecommunications industry. This IETF (Internet Engineering Task Force) driven protocol represents a key ingredient in the converging world of telecommunications based applications. ATC's SIP product allows customers to turn up voice services on the fly, no more than 4 to 6 week windows for delivery of lines and/or circuits. Ask your ATC representative how you can start deploying our SIP product today.

Benefits

- No more rate center restrictions! Port existing numbers to ATC from any service provider
- Turn up in days not weeks
- Restrict certain users from dialing domestically and/or internationally

Flexibility

- 24/7/365 monitoring of SIP devices
- No call centers to deal with, ATC has direct account reps to help manage your port, turn up, and any trouble shooting
- All inclusive calling plans available

Savings

- Lower usage related charges
- Volume and term discount plans available
- Scalable packages
